

REMARKS

Claims 1, 2, 5, and 9 were rejected under 35 USC 102(e) as being anticipated by Hull et al. Claims 3-4, and 6-8 were objected to as being dependent upon a rejected base claim, but the Examiner indicated that such claims would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

By this amendment, independent claim 1 has been changed to include the allowable subject matter of claim 4. Accordingly, amended claim 1 is believed to be patentable over the prior art.

Claims 2 and 3 depend on amended claim 1, and therefore, are believed to be allowable for at least the reasons identified with regard to claim 1. Claims 4-9 have been cancelled. Accordingly, the rejection of claims 5 and 9 under 35 USC 102(e) is believed to be moot.

Claims 10-13 were rejected under 35 USC 103(a) as being unpatentable over Hull et al.

Claim 10 depends on amended claim 1, and therefore, is believed to be allowable for at least the reasons identified with regard to claim 1. Claims 11-13 have been cancelled. Accordingly, the rejection of claims 11-13 under 35 USC 103(a) is believed to be moot.

By this amendment, new claims 17-50 have been added to more clearly set forth the present invention. Claims 17-30 are directed to a method of transferring one or more digital images from an electronic camera to a service, wherein the camera includes optics and an image sensor for generating an image signal, a display for displaying images, a plurality of user inputs, a first digital memory for storing digital images, a second digital memory for storing a network configuration file, and a communications interface. Claims 31-40 are directed to a method of transferring one or more digital images from an electronic camera to an online service, wherein the camera includes a first digital memory for storing digital images and a second digital memory for storing a network configuration file. Claims 41-49 are directed to a method of transferring one or more digital images from an electronic camera to a service, wherein

the camera includes a first digital memory for storing digital images and a second digital memory for storing a network configuration file. New claim 50 is directed to an electronic camera for transferring one or more digital images to a service. New claims 17-50 are believed to be patentable over the prior art. No new matter has been added.

If there are any formal matters remaining after this response, Applicants' attorney would appreciate a telephone call to attend to these matters.

In view of the foregoing, this application is believed to be in condition for allowance, the notice of which is respectfully requested.

Respectfully submitted,

A handwritten signature in cursive script, reading "Pamela R. Crocker", written over a horizontal line.
